

CASE STUDY:
Närpes Grönsaker / Närpes, Finland

” We chose Njord Clean Air as they are very price-friendly compared to the competitors. ”

We purposefully strive to continuously improve food safety, which enables us to always provide safe and reliable food to consumers. For us, it is of the utmost importance that vegetables of the highest quality are grown responsibly, which means that we prioritize the choices that benefit future generations, promote safe domestic production and follow strict guidelines for growing processes.

We use air purification to minimize the problems with dust particles that mainly forklift traffic entails and we chose Njord Clean Air as they are very price-friendly compared to the competitors. Good contact with sellers, fast deliveries and smooth service make the collaboration painless. Now we have far fewer dust particles in the air than before, protecting both our products and employees.
