

REDUCES THE SOUND FROM THE
AIR PURIFIER BY 10-15 DBA

Silencer for Njord XP-2

Njord's silencer ensures the highest possible air purification without disturbing noise.

Advantages:

- Ensures the highest possible air purifying effect even in sound-sensitive environments.
- Meets general requirements for ceiling mounting under sprinkler systems.
- Elegant design in the same style as the air purifiers.
- Manufactured in lightweight materials for minimal impact on the air purifier installation.

The free-standing silencer is easily mounted over the air purifier's exhaust and thus reduces the sound that occurs when the fan rotates. By reducing the sound, you can ensure the most effective air purification possible without creating disturbing noise. Njord's air purifiers are all equipped with Njord Constant Flow™, (the recommended way to control the units among several different programming possibilities), which means that the air purifier's motor operates at higher speeds the more clogged the air filters become. This technology ensures a constant high purification of the air that guarantees the

effect over time. With Njord's silencer, you can keep down the noise level from the exhaust even during the periods when the engine is running at higher speeds and maintain the high clean air flow. The alternative of reducing the noise level by running the engine at a lower speed gives a much worse air purification effect.

The silencer is well suited for businesses with low background noise or in situations where the air purifier is placed close to people, for example due to low ceiling height.

Characteristics:

- Reduces the sound from the air purifier by 10-15 dBA
- Ensures the most efficient air purification possible without creating disturbing noise.
- Freestanding unit that can be easily retrofitted to already installed air purifiers.
- Lightweight and efficient.

Technical Specifications:

Sound attenuation effect: -10 till -15 dBA
Dimensions (WxDxH): 675 x 405 x 305 mm
Weight: 5,25 kg

 **Compatible with:** Njord XP-2

Customised for:

All types of environments where you want to minimize noise but ensure the highest air purification efficiency.
