

A large, industrial-grade Njord air purifier unit is suspended from the ceiling of a factory. The unit has a white metal frame with a grid of brown filters. The Njord logo is visible on the side. Below the unit, a conveyor belt is filled with numerous clear glass bottles, likely for mineral water, moving through the production line. The factory floor is visible in the background, showing various industrial equipment and structures.

CASE STUDY:
Tönissteiner / Rhein-Eifel, Germany

“Njord delivered a compelling package, installed it, and has kept its promises.”

As a mineral water producer, we specialise in the production and bottling of mineral water and soft drinks in glass and PET bottles, including bottle washing, packaging, and logistics. Good air quality is particularly important to us because the cleaned bottles are handled in the same production area as the yet-to-be-washed bottles. Prior to the installation of air purifiers, this therefore posed a potential risk of contamination of the product during the filling process. We also previously experienced that the air could feel both stuffy and polluted.

With the introduction of Njord's air purification solution, the working environment has improved noticeably. We use Njord Connect™ ECO+, which continuously measures air quality, and the recorded

data shows a significant improvement – the microbiological load in the air has decreased substantially. This development is of great importance to us and minimizes the risk of microbiological contamination of the products.

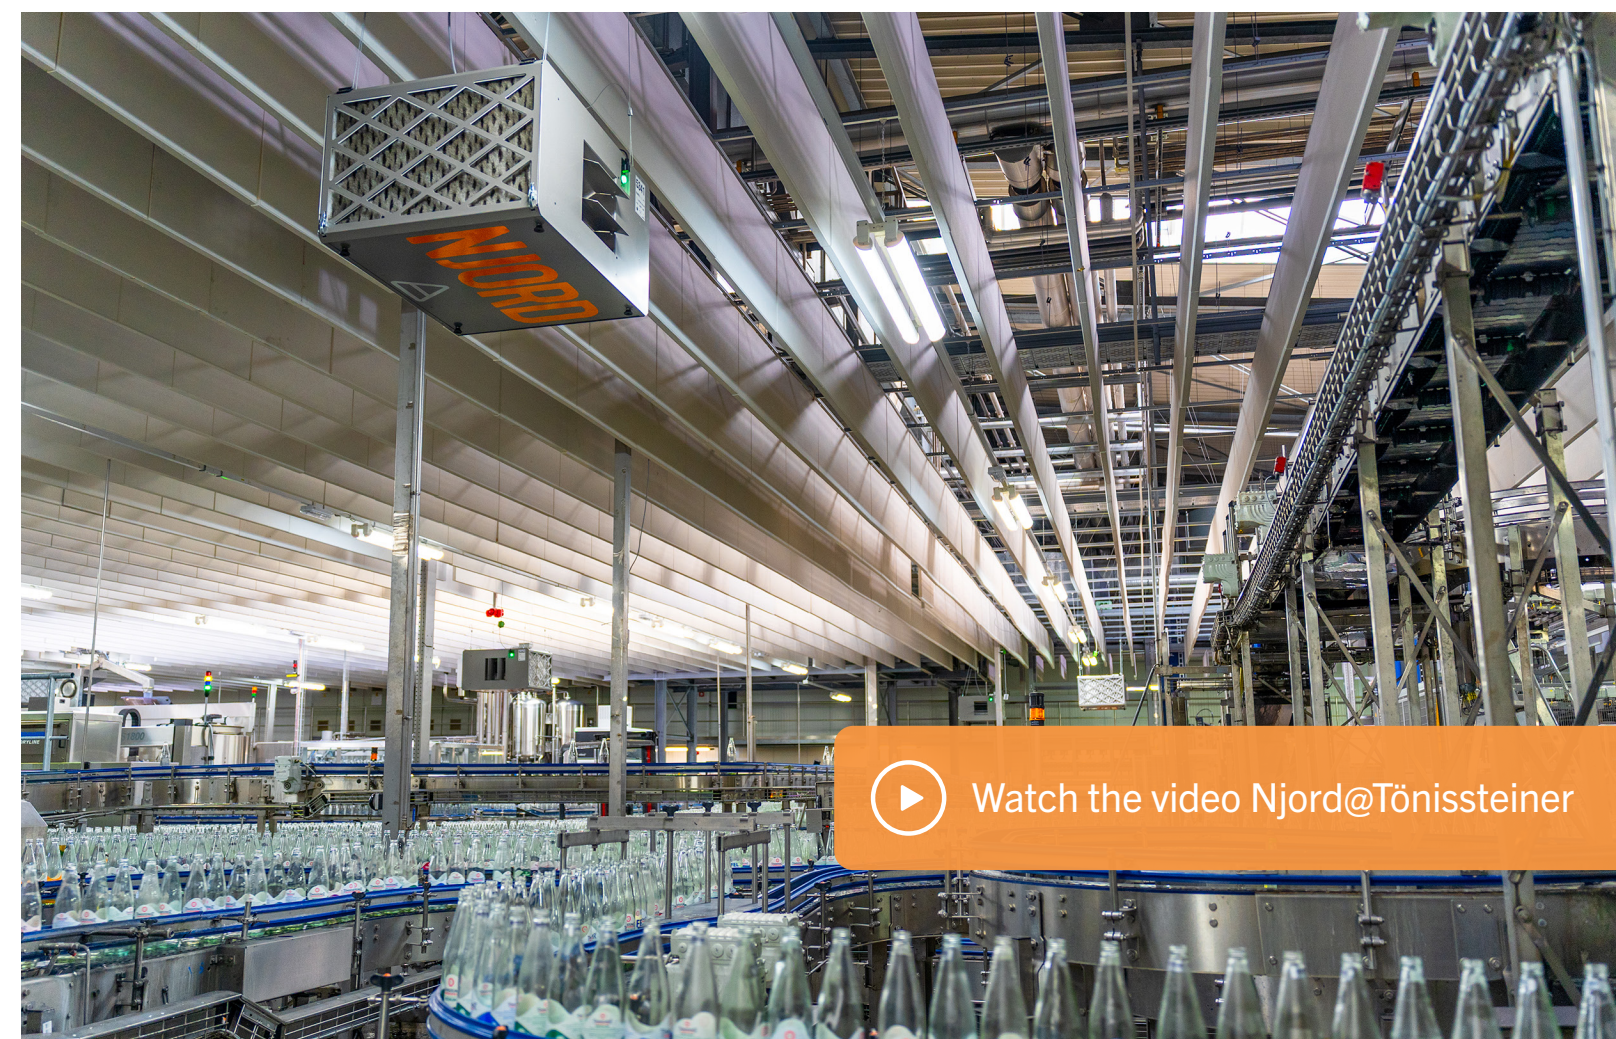

For us, the continuous digital monitoring and control of the air purifiers via Njord Connect™ ECO+, together with the price, were decisive factors in choosing the air purification system. Njord delivered a compelling package, installed it, and has kept its promises. After almost a year, I can only report positive experiences. The collaboration with Njord works very well, communication has been flawless so far, and service is carried out very quickly without disrupting production.

Mike Becker, Production Manager
Tönissteiner / Rhein-Eifel, Germany

TÖNISSTEINER®
PRIVATBRUNNEN

TÖNISSTEINER is a medium-sized family-owned company with a flat organizational structure and a family-oriented working environment. As a significant private mineral water producer in Germany and a strong export brand in Belgium, the company is aware of its environmental responsibility and operates with a strong focus on sustainability. TÖNISSTEINER has deep roots in the Rhein-Eifel region, contributes to safeguarding local jobs, and regularly offers apprenticeship and training opportunities. With around 100 employees, the company is an important, reliable, and employee-oriented employer in the region. The mineral water owes its fresh and harmonious taste to its origin in the volcanic Eifel region.
