Njord point extraction

Get the most clean air for your money!

BACKGROUND

Njord's goal is to create clean environments as efficiently as possible. If there are stationary dust sources in your environment, then point extraction directly at the source is the most effective way to eliminate that dust source. We offer stationary and mobile systems as well as extraction arms for existing systems.

APPLICATION

Njord's systems are user-friendly and easy to use. We are happy to handle installation and ongoing service as well as train your staff to use the equipment.

EFFICIENCY

Used correctly, Njord Point Extraction can drastically reduce the amount of dust and other pollutants in your environment. The filters used are more than 99.9% effective for all particle sizes. The filters can be cleaned, for which we provide a safe system, or replaced.

FLEXIBLE SOLUTIONS

Njord's product catalogue includes a number of different point extraction products, our staff can help you choose the right product depending on what suits your particular environment.
