Njord XP

Get the most clean air for your money!

Njord XP - Extreme Performance has been developed with the goal of combining a compact design with maximum filtration area and the ability to tailor filters according to customer needs.

Compact design is important in order to offer many installation options. In order to meet the new sprinkler requirements, the unit must have a surface no larger than 1 sq.m. The maximum filtration area directly relates to the efficiency of the unit. We have maximized the filter area by drawing air from two directions. This is made possible by a double-suction radial fan.

Njord XP has two filter steps in its standard version. The first filter has the task of filtering as much dust as possible, mainly large particles. The second filter has the task of cleaning the air as efficiently as possible down to the smallest and most dangerous particles.

Which filters are put to use depends on your situation and your purposes.

Njord XP is built of high quality components with as little environmental impact as possible.

The Njord XP dimensions are (1000x1000x550) mm, and it weighs only 51kg, which is considerably less than other units on the market.

TECHNICAL DATA:

Length: 1000 mm
Width: 1000 mm
Height: 550 mm
Weight: 51 kg
CADR (max) : 3600 m³/h
Filter: up to H13
Electrical data: Single phase 1~230V;
3,1A; 50Hz, 680W

BENEFITS:

- Reduced cleaning costs
- Reduced maintenance costs
- Higher customer satisfaction as customers receive clean goods and products
- Reduced sick leave and, more importantly, more satisfied staff
- Reduced heating costs when the hot air no longer accumulates under the ceiling
- Less problems with equipment as sensitive parts don't get clogged by dust
- Your premises are always ready for an inspection or an important visit.
